

Chaimongkon Sokgampang

Full-Stack Engineer | Banking & Fintech Systems

+66 61 7289145 | chaimongkon.sokgampang@gmail.com | [LinkedIn](#) | [GitHub: Xsmitly](#) | [Portfolio](#)

SKILLS / INTEREST / MISCELLANEOUS

Languages: Thai (Native), English (Professional Working Proficiency – TOEIC 780)

Tech Stack & Tools: Java, Spring Boot, React, Next.js, Node.js, Elysia.js, Go, WebSocket, MySQL, PostgreSQL, Docker, Nginx, CI/CD (GitLab CI, Kaniko), AWS (EC2, S3)

AI-Assisted Development: Codex, Claude Code

Soft Skills: Communication, Critical Thinking, Adaptability, Problem Solving, Time Management, Agile Collaboration

EDUCATION

King Mongkut's University of Technology Thonburi (KMUTT)

2022 – Expected 2026

Bachelor of Science in Information Technology (IT)

- GPAX: 3.66/4.00
- Academic Excellence Scholarship – awarded for top performance in IT program

WORK EXPERIENCE

SCB – Siam Commercial Bank | Software Engineer (Part-time)

Oct 2025 – May 2026

- Re-architected the AMLX rule engine into a dynamic, database-driven system, eliminating engineering dependencies for compliance updates and letting business teams modify rules without code deployment.
- Optimized React frontend and Spring Boot backend modules to resolve legacy bottlenecks, improving stability of the AML workflow.
- Partnered with senior engineers and system analysts to refine requirements and analyze complex business workflows, supporting the modernization of legacy components.

TTB – TMBThanachart Bank | Software Engineer (Intern)

May 2025 – Sep 2025

- Built an internal productivity dashboard adopted by 7 team leads and used by 100+ developers, recognized at the TTB Townhall for improving team operations and visibility.
- Validated technical feasibility and optimized backend workflows with senior engineers using Spring Boot, bridging product vision and technical implementation.
- Designed user flows and backend features that addressed engineering leads' pain points, streamlining cross-team communication.

Freelance Full-Stack Developer (Part-time, alongside studies)

Feb 2025 – Dec 2025

- Delivered production-ready web applications for clients using React, Spring Boot, and MySQL, owning architecture, implementation, testing, and deployment end-to-end.
- Managed the full SDLC from requirement gathering to final delivery, ensuring scalable, maintainable code for long-term client success.

Tomato Ideas Co., Ltd. | Full-Stack Developer (Intern)

Jan 2025 – May 2025

- Designed and implemented a scalable middleware API with Node.js and Elysia.js, standardizing third-party integrations for reliability and maintainability.
- Prototyped and validated key Proof-of-Concept (POC) features, delivering technical feasibility insights that shaped the core product roadmap.
- Collaborated cross-functionally to integrate validated POCs into production, enabling faster feature rollouts.

PROJECT EXPERIENCE

modenote — AI-Powered Real-Time Conversation Assistant

Jun 2026 – Present

- Built a real-time conversation sidekick that transcribes live audio via Deepgram and proactively surfaces follow-up questions a speaker might overlook – built to solve a personal pain point of forgetting key questions during live interviews.
- Architected modenote as an MCP server, exposing live transcripts so any MCP-compatible AI client can query and act on conversation data in real time.
- Decoupled the LLM provider layer (currently running DeepSeek V4 Flash) from the core pipeline for a swappable reasoning backend; built solo with Next.js and Elysia.js, currently in active personal use.

FreeFlow Omni-Chat (SaaS for Freelancers)

Aug 2025 – Present

- Tracked a critical production crash down to the syscall level and shipped a custom patch to the upstream socket.io library, restoring stability under real Linux workloads.
- Architected a multi-tenant system with organization-based access control and identity resolution, keeping data strictly isolated while unifying sender tracking across platforms.
- Built a high-concurrency messaging layer on Go Fiber and WebSocket, with Nginx routing tuned for low-latency real-time delivery.
- Automated the release pipeline end-to-end with GitLab Runner and Kaniko.
